

IN THE CLAIMS

1-15. Canceled.

16. (Currently Amended) A display apparatus connectable to an external computer for displaying an image on a screen on the basis of video and synchronization signals from said external computer, comprising:

a memory ~~which comprises;~~

a receiver ~~receiving~~ which receives a control signal generated on the basis of an instruction ~~a control command~~ inputted ~~in~~ through an input means of said external computer; and

a control circuit ~~for controlling~~ which controls said image on said screen using control data including said ~~based on a control signal received through said receiver and~~ writes said control data into said memory,

wherein said control circuit reads control data from said memory when said display apparatus is turned on and controls said image on said screen by using said control data read out from said memory ~~by said control circuit.~~

17. (Previously Presented) A display apparatus according to claim 16, wherein said memory is made of an EEPROM.

18. (Previously Presented) A display apparatus according to claim 16, further comprising means for sending an acknowledge signal indicating receipt of said control signal to said external computer.

19. (New) A display apparatus according to claim 16, wherein said instruction is entered through a mouse.

20. (New) A display apparatus according to claims 16, wherein said instruction is entered through a keyboard.

21. (New) A display apparatus connectable to an external computer for displaying an image on a screen on the basis of video and synchronization signals from said external computer, comprising:

a memory;

means for receiving a control signal generated on the basis of an instruction inputted through an input means of said external computer; and

means for controlling said image on said screen using control data including said control signal received through said receiver and writing said control data into said memory,

wherein said means for controlling reads control data from said memory when said display apparatus is turned on and controls said image on said screen by using said control data read out from said memory.

22. (New) A display apparatus according to claim 21, wherein said memory is made of an EEPROM.

23. (New) A display apparatus according to claim 21, further comprising means for sending an acknowledge signal indicating receipt of said control signal to said external computer.

24. (New) A display apparatus according to claim 21, wherein said instruction is entered through a mouse.

25. (New) A display apparatus according to claims 21, wherein said instruction is entered through a keyboard.
